INTRODUCTION

My career have started already during my studies as a receptionist in a tourist camp. After several months I have learned a lot about different currencies, cheques, payments which later allowed me to receive an offer by Ljubljanska banka, the largest bank at the time. Those were the first steps into the banking industry. After several years of different fields of banking there was a new opportunity which was in its early stage of development and it was called IT.

As I had some basic programming experience, strong technical background I was sent to first internal trainings and that is how my IT career really started.

Later in the following years I developed my knowledge through numerous trainings, courses organised by SKB BANKA where I continued to develop my banking IT career as a skilled software developer and analyst. I was responsible for process optimisations and their alignment with the internal software applications.

As those were really prosperous days of IT sector which was one of the fastest growing in the country I got an offer by the largest Slovenian software developer HERMES SoftLab. In the meantime I have also received a special certificate » Independant researcher«, issued by the Ministry of Science and Technology.

Finally after several years of sucessfull cooperation I decided to establish my own company NEMET.COM. Initially the business was mainly related to banking industry where I worked as a project manager, analyst, solution architect, DB administrator etc. Among others we had a 12 year lasting contract with BANKA DOMŽALE, we have sucessfully developed several software applications with companies S&T and SRC.SI

Think globally and act longterm
